Profile

I am always **learning** and **teaching**, especially in the world of programming. What drives me is developing **simple** and **efficient solutions** for everyday **problems**, and I enjoy it even more when I can do it as part of a **team**, sharing a good **mate** (argentinian drink meant to be shared).

Soft Skills

Effective communication	Customer oriented approach
Decision making	Problem solving
Leadership	Adaptability

Marco Tignanelli

Full Stack Web Developer

Experience

Software Engineer - EPAM Systems
March 2024 - Present
I was part of the full stack team developing an application to generate personalized meal plans, including an admin dashboard to manage users, suppliers, and configurations.

- **Full Stack Development:** Implemented new features and optimized code using **Next.JS** and **FastAPI**.
- **Technical Leadership:** Organized and guided the team to improve development management.
- **Refactoring:** Transformed a poor implementation into a **RESTful** API, **normalized** the database, **optimized** state management in React, and reduced code size.
- **Production:** Successfully launched the application, which now has active users.

Full Stack Developer - Vates Software
August 2023 - March 2024
I contributed to the **development** of two key applications for the company:

- **Commission Calculation**: Worked as a **front-end** developer. We used prebuilt components and followed a Figma design. The app calculated project managers' commissions.
- **Weighted Quality Indexes**: Focused on **back-end** development. Created an API to calculate quality indexes based on metrics such as sprints and completed project goals.

We followed **Scrum** best practices, prioritizing fast deliveries and efficient solutions. The tech stack included **React** with **Next.JS** on the front end and **Python** with **FastAPI** and **PostgreSQL** on the back end for both projects.

Front-End Developer - PPOL
July 2023 - August 2023
Developed integrations with various APIs (Google Maps, GitHub, Spotify, etc.) in **React** to embed them into the company's main application.

Full Stack Developer - Hueney Ruca
April 2023 - May 2023
Developed a web **e-commerce** application as a final project at SoyHenry and for a client.

- Used **Next.JS** for full stack development and **Supabase** as the database.
- The product allowed users to book vacation cabins, including a payment gateway and an admin dashboard for managing listings.
- My role involved both front-end and back-end development, using **Scrum** methodology for fast and continuous delivery.

Education

Information Systems Engineering
Universidad Tecnológica Nacional | April 2024 - December 2029

Full Stack Web Developer
SoyHenry | February 2023 - April 2023
